Multimedia and Security

- > **Security**
 - ❖ means to avoid attacks to computers, stored and transmitted data, and communication links
- > **Safety**
 - ❖ attempt to decrease effects which can cause unavailability or damage of computers, stored or transmitted data, and communication links
- > **Multimedia**
 - ❖ combination of discrete and continuous media (narrow and broader sense), independence, computer-supported integration, communication-aware systems

Privacy Concerns

CVBORNICI ZAGUS
Exposed to Public, Impacts U.S. and lives in other countries

In the U.K.:

- 4.2 million closed circuit cameras – one for every 14 people.
- Average person is viewed by 300 cameras a day.
- facial and licence plate recognition technology to track anyone who looks suspicious.

Is this the kind of future we want?

Tele-Surveillance

Shift in the security paradigm from "investigation" to "preemption"

- > **Current systems can:**
 - ❖ Capture video
 - ❖ Store video
 - ❖ Distribute video
- > **New systems will:**
 - ❖ Provide some level of detection
 - ❖ Need a human to further research unusual/rare events highlighted by the system

In practice, Surveillance systems may be used for purposes other than security

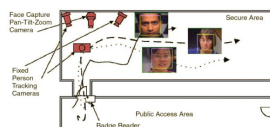

7 Beyond the E
in a saddle

www.afis.usc.af.mil

Enabling technologies

Smart Sensors

- > **Integrates**
 - ❖ Sensing hardware
 - ❖ Processing unit
 - ❖ Communication interfaces
- > **Advantages**
 - ❖ Unload networks
 - ❖ More compact
 - ❖ Low cost

8 Beyond the E
in a saddle

www.afis.usc.af.mil
www.afis.usc.af.mil

Enabling Technologies

Embedded processing

- > **Integration of more functionalities in smaller components**
- > **Advantages:**
 - ❖ **Sophisticated video encoding in Real-time**
 - H.264 (MPEG-4 Part 10) Video encoding
 - Better video quality in lower levels
 - Limited bandwidth requirements for transmission
 - decreased storage requirements
 - ❖ Lower total cost of ownership
 - ❖ Higher reliability
 - ❖ Greater flexibility and Scalability

9 Beyond the E
in a saddle

Enabling Technologies

Digital Signal Processor (DSP)

- **Specialized microprocessor designed specifically for digital signal processing, generally in real-time.**
 - ❖ Separate program and data memories
 - ❖ Special Instructions for SIMD (Single Instruction, Multiple Data) operations
 - ❖ Only parallel processing, no multitasking
 - ❖ The ability to act as a direct memory access device if in a host environment
 - ❖ Can take digital data from ADC (Analog-Digital Converter)

Embedded processing enables

- **Detection algorithms to achieve enhanced level of awareness**
 - ❖ Video Analytics
 - ❖ Semantic Video Data Classification
 - ❖ Pattern Analysis
 - ❖ Semantic analysis
 - ❖ Semantic description of content (MPEG-7)

Enabling Technologies

Communication

- **Network topology of multiple smart sensors**
 - ❖ I/O lines for data transmission
 - ❖ Communication interface for control
 - ❖ Massive distributed video surveillance systems
- **Protocols:**
 - ❖ Ethernet
 - ❖ Serial
 - ❖ WLAN
 - ❖ GPRs

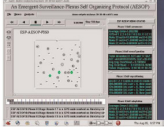

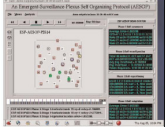

www.rii.lt/uct/wsn/act/~slsaddik
www.sl-saddik.com

Self-Organizing Wireless Sensor Networks

- **Enables or Enhances**
 - ❖ Basic Sensing
 - ❖ Resource and Energy Management
 - Network lifetime
 - ❖ Cooperative signal processing
 - ❖ Redundancy and recovery
 - ❖ Communications
- **Advantages**
 - ❖ Low cost
 - ❖ Scalable

- **Four phase in WSN deployment**
 - ❖ Self-awareness
 - ❖ Self-reconfiguration
 - ❖ Self-repositioning
 - ❖ Self-adaptation

Digital Watermarks for Multimedia

15
Beyond the E
rii-saddik

www.it-ebooks.info
www.it-ebooks.com

Digital Watermarking

- Watermarking is a method to hide secret information in a multimedia content
- Roots in *Steganography*
 - ❖ *Stegano* for "covered" and
 - ❖ *graphos* "to write"

16
Beyond the E
© sbaddik

www.it-ebooks.info
www.it-ebooks.com

Steganography - Hiding Information

- Goal
 - ❖ hide secret communication
 - ❖ hide secret messages in regular messages
 - ❖ attacker should not see second secret message
 - ❖ secret messages are "invisible"
 - ❖ "invisible writing"

17
Beyond the E
© sbaddik

www.it-ebooks.info
www.it-ebooks.com

Simple Example 1

Taking the first letter in each word

News Eight Weather: Tonight increasing snow. Unexpected precipitation smothers eastern towns. Be extremely cautious and use snowtires especially heading east. The highways are knowingly slippery. Highway evacuation is suspected. Police report emergency situations in downtown ending near Tuesday.

Hidden Information!

Newt is upset because he thinks he is President.

18
Beyond the E
© sbaddik

www.rits.uoitfwa.ca/~dlsaddik
www.rits-saddik.com

Simple Example 2

Taking the second letter in each word
(actually sent by a German Spy in WWII)

Apparently neutral's protest is thoroughly discounted and ignored. Isman hard hit. Blockade issue affects pretext for embargo on by products, ejecting suets and vegetable oils.

Hidden Information!

Pershing sails from NY June 1.

19
Beyond the E
© dlsaddik

www.rits.uoitfwa.ca/~dlsaddik
www.rits-saddik.com

Information Hiding

Distinguished but imperceptible marks

- > Contain a hidden copyright notice or serial number
- > Help to prevent unauthorized copying directly

Example

- > **Military Communications System**
 - ❖ Conceal its sender, its receiver or its very existence
- > **Mobile Phone System, DVD Player, Digital Election, Cash**

20
Beyond the E
© dlsaddik

www.rits.uoitfwa.ca/~dlsaddik
www.rits-saddik.com

Definition of Digital Watermarking

- > **Digital Watermarking technology**
 - ❖ allows users to embed some data into digital contents such as
 - still image,
 - movie and
 - audio data.
- > **When data is embedded,**
 - ❖ it is not written at header part but embedded directly into digital media itself by changing media contents data.

21
Beyond the E
© dlsaddik

Multimedia and security

- > **Video Conferencing:**
 - ❖ Only allowed participants in a video conferencing session
- > **Pay-TV (Pay per View)**
 - ❖ Only allowing paying customers to listen to a live broadcast
- > **Video on Demand**
 - ❖ Only allowing paying customers to listen to a recording or file
- > **Restricting where, when or how a recording is accessed**

22
Beyond the E
© sbaddik

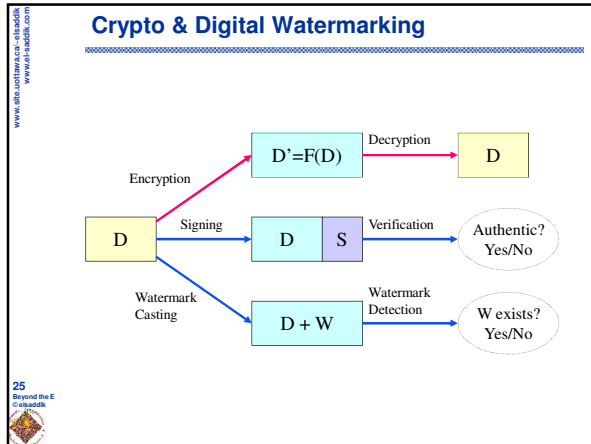

How It Works?

Watermarking

23
Beyond the E
© sbaddik

Overall Model

24
Beyond the E
© sbaddik

- Applications of Watermarks**
- > **Rights management**
 - ❖ Copyrights protection
 - ❖ Content distribution, tracking and monitoring
 - > **Contents management**
 - ❖ Captioning
 - ❖ Annotation
 - > **Access/copy control**
 - ❖ Prevent unauthorized copy, playback of multimedia contents
 - > **Authentication**
 - ❖ Assure contents integrity
 - ❖ Prevent unauthorized alternation of contents
 - ❖ Detect alternation location in the contents
- 26
Beyond the E
© sbaddik

- Why? - Copyrighting**
- > **Watermarking preserves intellectual property unlike encryption**
 - ❖ Permanent proof of originality for paper media.
 - Verifies ownership of media suspected of misappropriation
 - ❖ Usage Control:
 - Permanent proof of ownership for digital media.
 - Preventing people making illegal copies
 - ❖ Content protection for preview
 - Digital detection of the watermark would indicate the source of the image
- 27
Beyond the E
© sbaddik

www.it-ebooks.info
www.it-ebooks.info

Why? - Authentication

- > **Authentication**
 - ❖ Keeping things secret
 - ❖ Making sure only the right people get access to things
 - ❖ (Making sure the applications don't have security flaws)
 - ❖ A watermark will be destroyed when the image is manipulated digitally in any way.
 - ❖ Proves authenticity of media.
 - If the watermark is still intact, then the image has not been "doctored."
 - If the watermark has been destroyed, then the image has been tampered with.

28
Beyond the E
© eSaddle

www.it-ebooks.info
www.it-ebooks.info

Types of Watermarks (I)

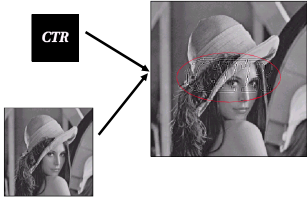

- > **Visible**
 - ❖ A visible translucent image which is overlaid on the primary image
 - Example: Visible corporate logo to protect copyrights
- > **Invisible**
 - ❖ An overlaid image which cannot be seen, but which can be detected algorithmically
 - ❖ Embedding level is too small to notice
 - ❖ Can be retrieved by extraction software
 - ❖ Applications:
 - Authentication
 - Copyrighting

29
Beyond the E
© eSaddle

www.it-ebooks.info
www.it-ebooks.info

Visible Watermark

- > Logo or seal of the organization which holds the rights to the primary image, it allows the primary image to be viewed, but still marks it clearly as the property of the owning organization.
- > Overlay the watermark in a way which makes it difficult to remove, if the goal of indicating property rights is to be achieved.

The diagram illustrates the process of applying a visible watermark. On the left, there is a small image of a woman's face. A black box containing the text 'CTR' has an arrow pointing to the top of the woman's head in the larger image on the right. The larger image shows the woman's face with the 'CTR' watermark overlaid on her forehead area.

30
Beyond the E
© eSaddle

Invisible Watermark

Watermarks: Secret Code for Protection

- 1 Depending on the chosen technique, noise is added to every data element or just to a pseudo-random subset
- 2 Hidden information (watermark) is embedded in the noise signal of the original.
- 3 Watermark is invisible and can be retrieved only by extraction software.

31 Beyond the E in eSaddik
www.eSaddik.com

Types of Watermarks (II)

Robust watermarks:

- > There should be no way of removing the embedded information without rendering the cover object unusable
- > Visible watermarks
- > Unperceivable watermarks
- > Fingerprinting:
 - ❖ a unique watermark in each object

Applications:

- ❖ To resolve original owner/creator disputes
- ❖ Detect copies copyrighted material
- ❖ Fingerprinting
 - Traitor tracing – detect who leaked a copy

32 Beyond the E in eSaddik
www.eSaddik.com

Types of Watermarks (II)

Fragile watermarks

- > Any manipulation of the cover object removes the watermark
- > Can detect changed objects, compressed copies, etc.
- > Also useful with fingerprinting

Applications:

- ❖ Only allow devices to play watermarked objects
 - No copies
- ❖ Fingerprinting
 - Only allow objects to be played on one, unique device

33 Beyond the E in eSaddik
www.eSaddik.com

www.rii.uottawa.ca/~shaddik
www.rii.saddik.com

Properties/Features of Digital Watermarks

- **Invisible/Inaudible**
 - ❖ Information is embedded without digital content degradation, because of the level of embedding operation is too small for human to notice the change.
- **Inseparable**
 - ❖ The embedded information can survive after some processing, compression and format transformation.
- **Unchanging data file size**
 - ❖ Data size of the media is not changed before and after embedding operation because information is embedded directly into the media.

34
Beyond the E
shaddik

www.rii.uottawa.ca/~shaddik
www.rii.saddik.com

Image watermark

- **Spatial Watermarks**
 - ❖ Watermark is inserted in the spatial domain
 - ❖ Has low bit capacity
 - ❖ Not robust to geometric distortions
- **Spectral Watermarks**
 - ❖ Watermark is inserted in the frequency domain
 - ❖ Watermark is generated using the principle of Direct-Sequence Spread Spectrum (DS-SS)
 - Image Adaptive DCT Watermarking
 - Image Adaptive DWT Watermarking

35
Beyond the E
shaddik

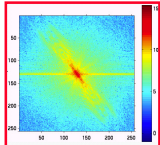

www.rii.uottawa.ca/~shaddik
www.rii.saddik.com

Invisible Watermarking for Multimedia

- E.g. Secure Spread Spectrum
- Non-visible watermarking using random vector
- Computation of spectral components using DCT
 - ❖ Discrete cosine transformation
 - Computation of various frequency bands according to luminance and chroma values

→ DCT →

36
Beyond the E
shaddik

Secure Spread Spectrum

- Selection of n significant points
- Change values of these points by adding watermark

❖ E.g. $v'_i = v_i + \alpha x_i$

37
Beyond the E
© asad@k
www.asad@k.com

Secure Spread Spectrum

- Identification of watermark:
 - ❖ Computing the difference between original picture and test picture
 - ❖ Comparing difference with embedded watermark
- Robust against JPEG and MPEG compression
- Robust against skaling
- Robust against changing luminance and contrast

38
Beyond the E
© asad@k
www.asad@k.com

Adaptive & Non-Adaptive Watermarking

Watermarked Images

Watermarks

1. Non-adaptive DCT watermarking
2. Image-adaptive watermarking using DCT
3. Image-adaptive watermarking using WT (Wavelet Transform)

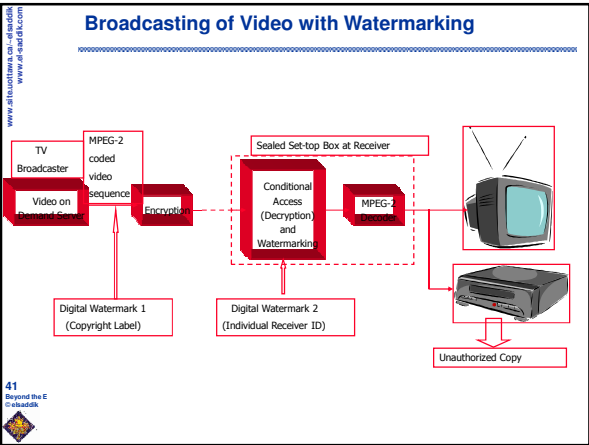

39
Beyond the E
© asad@k
www.asad@k.com

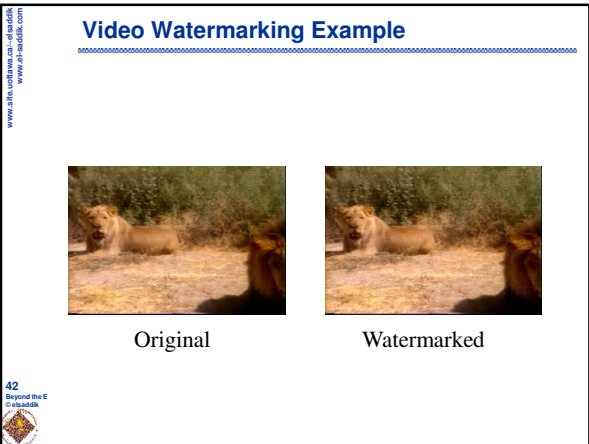

www.its.uoft.toronto.ca/~atlasdtk
www.at-sasdlk.com

Video Watermarking

- Watermark is added to I frames only
- Drift compensation signal is needed to compensate for watermark signals from previous frames
- Scene adaptive watermarking can prevent removal of watermark by inter-frame collusion
- There are mainly 3 copy protection states:
 - ❖ “one-copy”
 - ❖ “no-more-copy”
 - ❖ “never-copy”

Audio Watermarking

- Watermarking in audio signal is a challenge due to Human Auditory System (HAS)
- Two main areas considered for modification,
 - ❖ Digital representation
 - WAV, AIFF or low quality □-law format, etc
 - ❖ Signal's transmission pathway
 - Digital, resampled, analog and over the air
- Watermarking
 - ❖ Low bit coding
 - ❖ Phase coding
 - ❖ Spread spectrum, etc

Watermarking 3D Objects

- Research on digital watermarking of 3D objects is becoming important as more and more 3D data is entering the World Wide Web.
- Problems:
 - ❖ One must deal with low volume of data.
 - ❖ Handling and editing may involve a variety of complex geometrical or topological operations.
 - ❖ No unique representation of model data exists.
- The embedded watermark should be robust and resist all/most of the following modifications:
 - ❖ Rotation
 - ❖ Translation
 - ❖ Uniform Scaling
 - ❖ Polygon simplification
 - ❖ Randomization of points
 - ❖ Re-meshing
 - ❖ Mesh smoothing operation
 - ❖ Shearing

46 Beyond the E in-saddik

www.rii.uottawa.ca/~sbsaddik
www.rii-saddik.com

Requirements for 3D Object Watermarking

- Geometry is the best candidate for watermarking, being the least likely to be removed
- List of embedding primitives invariant to different geometrical transformations:

Altered by all transformations	coordinates of a point
Invariant to translation & rotation	length of line, area of polygon, volume of polyhedron
Invariant to rotation, uniform-scaling & translation	angles, ratio of areas of two polygons
Invariant to affine transformation	ratio of lengths of 2 segments of a line, ratio of volumes of 2 polyhedrons

- ❖ Triangle Similarity Quadruple (TSQ) Embedding
- ❖ Tetrahedral Volume Ratio (TVR) Embedding
- ❖ Mesh Density Pattern Embedding

47 Beyond the E in-saddik

www.rii.uottawa.ca/~sbsaddik
www.rii-saddik.com

TSQ Algorithm

TSQ (Triangle Similarity Quadruple) Watermark Embedding

1. Find a set of triangles to be used as a Macro-Embedding Primitive (MEP)
2. Embed Marker value pair in the center triangle by changing $\{e_{14}/e_{24}, h_4/e_{12}\}$
3. Embed Subscript in the pair $\{e_{01}/e_{01r}, h_{10}/e_{12}\}$ by displacing vertex v_0
4. Embed the two Data symbols similarly, displacing v_3 and v_5
5. Repeat steps 1-4 until all data symbols of the message are embedded

48 Beyond the E in-saddik

www.rii.uottawa.ca/~d.sandik
www.d.sandik.com

Watermarking Standards

- > Being a new field no standards so far
- > Application environment is just like Compression where there are too many compression algorithms
- > Users prefer to use a single best-of breed technique for each application
- > Standard benchmark tests are necessary to test robustness, unintentional/intentional attacks, etc
- > Standard watermark application and extraction interface would allow users to create a plug and play environment that could select a watermarking scheme out of many

49
Beyond the E
© Sandik

www.rii.uottawa.ca/~d.sandik
www.d.sandik.com

Attacks: unintentional

There are a number of *unintentional* and *intentional* attacks:

Unintentional attacks:

- > Image: compression, transcoding, printing/scanning, filtering, noise, geometric transforms, cropping, compositing/mosaicing,...
- > Video: AD/DA conversion, compression, transcoding, text/logo insertion, geometric transformations, jitter, cropping,...

50
Beyond the E
© Sandik

www.rii.uottawa.ca/~d.sandik
www.d.sandik.com

Attacks: intentional

Intentional attacks:

- > watermark removal/interference:
 - ❖ denoising, compression, quantization, remodulation, blurring, averaging,...
- > Desynchronization (detector disabling):
 - ❖ cropping, affine and projective transforms, jittering, mosaicing, collage,...
- > Cryptographic:
 - ❖ key determination (brute force), Oracle attack (i.e., generate unmarked data by trial and error)
- > Protocol:
 - ❖ copy attack, printing/rescanning,...

→ Watermark research must include work on attacks!

51
Beyond the E
© Sandik

LAW

- DMCA - Digital Millennium Copyright Act
- EU copyright directive
 - ❖ "... Member States shall provide adequate legal protection against the circumvention of any effective technological measures, which the person concerned carries out in the knowledge, or with reasonable grounds to know, that he or she is pursuing that objective." ..
 - ❖ "... "technological measures" means any technology, device or component that, in the normal course of its operation, is designed to prevent or restrict acts, in respect of works or other subject-matter..."

Summary

- Watermarking
- Image, Video, 3-D models, Audio and Text
 - No watermarking technique is proven robust so far
 - Study of attacks leads to intensive evaluations of different watermarking techniques
 - Need for a standard to make watermarking systems interoperable
- Who is Interested:
- Military and intelligence agencies
 - Criminals
 - Law enforcement and counter intelligence
 - Secret communication without encryption
 - Media companies

Case studies

Case Study - Example (I)

Digital Commerce

- Publications
- Digital TV, DVD
- Digital Information (Digital Library)
- Game
- Music/Image/Movie
- E-Book (Digital Book)
- Cyber Education (E-Learning)
- Digital Cash (Electronic Payment Protocol)

Core

- Digital Contents (eContents)

The diagram shows a central yellow circle containing two blue cylinders labeled 'Database' and 'Information'. Six arrows point towards this circle from the following labels: 'E-Learning' (top-left), 'Digital Cash' (top), 'Digital Library' (top-right), 'Publications' (bottom-left), 'DVD/Game' (bottom), and 'E-book' (bottom-right).

Case Study - Example (I)

Nevertheless, the evolution from traditional publishing towards multimedia rich web-based publishing is underway

The chart shows the evolution of internet mediated publishing services over time. The y-axis is 'Total volume of internet mediated publishing services & products' and the x-axis is 'time' with markers for 'Mid 1990s', 'Turn of Millennium', and '2003+'. Three generations are identified: 1st-Generation (B2B services), 2nd-Generation (e-commerce), and 3rd-Generation (B2C web-based services). Various services are plotted as blue ovals, including Online catalogues, Professional media services, Web-based peer reviewed scientific journals, Buying books online (amazon.com), Personalized newspapers, e-books & direct publishing, and Printing-on-Demand.

56 Beyond the E in e-business

Source: Arthur D. Little, GigaPort

Case Study - Example (I)

The diagram shows a value chain from 'Writer' to 'Retailer' through 'Publisher', 'Printer', and 'Digital Content'. A large yellow diagonal watermark reads 'SECURE CONTENT WATERMARK'. Below the chain, two boxes describe 'Re-use' (emphasis on optimization of the value chain) and 'Tailoring' (emphasis on development of new services). Logos for 'direct-to-plate printing', 'OCB', 'eBook.nl', 'goReader', 'MIT', 'THE WALL STREET JOURNAL', 'NRC', and 'HANDELSBLAD' are shown.
