OTTAWA

Allen-Vanguard on hunt for new CEO

Allen-Vanguard Corp. is looking for a new CEO with the move of veteran CEO David Luxton to chairman of the board. Kent Rosenthal is the new chief financial officer. Versa Capital Management, a U.S. investment fund, bought the struggling Ottawa bomb-control technology company last year.

CANADA

New-vehicle sales drop 4.2 per cent

The number of new vehicles sold in Canada dropped in March by 4.2 per cent, Statistics Canada reported Friday. The decrease to 132,867 vehicles sold sliced gains made in February — when an increase of 8.1 per cent was reported — by nearly half, with all but one province posting a drop in new vehicle sales. Ontario, with a drop in sales of 4.2 per cent, was largely responsible for the national decline. In March, 48,881 new vehicles were sold in the province, down from just over 51,000 in February.

Manufacturing sales beat expectations

Manufacturing sales rose more than expected in March, led by shipments of food and motor vehicles, Statistics Canada reported Friday. Sales were up 1.2 per cent to \$44.5 billion during the month. Most economists had expected shipments to rise by one per cent in March. Food manufacturers saw one of the biggest sales increases, jumping 3.5 per cent from February — the largest rise since January 2008. Vehicle sales were up 3.6 per cent increase — the sixth gain in seven months.

UNITED STATES

Market plunge's mystery trader revealed

A big mystery seller of futures contracts during the market meltdown last week was not a hedge fund or a high-frequency trader, as many have suspected, but money manager Waddell & Reed Financial Inc., according to a document obtained by Reuters. On May 6, Waddell sold a large order of e-mini contracts during a 20-minute span in which U.S. equity markets plunged, briefly wiping out nearly \$1-trillion U.S. in market capital.

ASHLEY FRASER, THE OTTAWA CITIZEN

A group from the University of Ottawa is working with a \$300,000 budget and a scooter with a camera tied atop it, in the hope of making a better interactive mapping service than Google's Street View. Associate professor Robert Laganière is on the scooter; standing, from left, are student Jamal Saboune and professors Eric Dubois and Jochene Lang.

Going beyond Google

A team of professors from the University of Ottawa has created software that takes the Internet giant's Street View to the next level, VITO PILIECI reports.

A team of researchers from the University of Ottawa has set out to teach Google Inc. a lesson on how to make software.

The three professors believe the Internet giant's controversial Street View service should allow people to not only venture wherever they want, but allow them to take tours inside buildings.

"We are trying to make an application like (Street View) more immersive," said Robert Laganière, an associate professor in the School of Information Technology and Engineering at the university. "With Street View, all you can do is follow the path proposed by the application.

What we want to do is to be able to move in any direction."

Laganière partnered with professors Eric Dubois and Jochene Lang in late 2008 to come up with a superior street mapping system.

The problem with Street View, according to the trio, is that it feels like users are stuck on rails and are only being shown what Google wants them to see. What if they don't want to move in the direction Google is telling them to? Or what if the user wants to head off the beaten path and check out a local park or a landmark that can't be accessed by a car?

"(Now) you make a deci-

sion when you are at an intersection about whether to go right or left," said Laganière. "But the way we would like it to be is, if you are in a large space, then you can decide to move in any direction. If you want to approach a building, you can do it from any angle and any direction."

Whereas Street View displays arrows telling users which directions are available for them to travel in, the University of Ottawa software allows users to travel almost anywhere. If a user is checking out street images of Ottawa and wants to hop a curb and head toward the Rideau Canal, they can do so using the university's technology.

Creating the technology has been particularly challenging. While Google has billions of dollars, thousands of employees and fleets of camera-equipped automobiles at its disposal, the team of Ottawa researchers is

working on a shoe-string budget.

However, they have managed to reach most of their goals thanks to a bit of funding from the Natural Sciences and Engineering Research Council of Canada (NSERC), an electronic scooter, a donated R2-D2-like robot and the help of a handful of very smart PhD students at the university.

Using the battery-powered scooter, which is driven around town by student Jamal Saboune, the team has collected thousands of images of the university's campus and parts of downtown Ottawa. The scooter is equipped with a panoramic camera and a global positioning system (GPS), which allows 360-degree panoramic images to be captured and inserted into their software to create a virtual map.

Tim Hortons looks to go global

'Dramatically different' company promised

BY HOLLIE SHAW

TORONTO

Tim Hortons Inc. is looking to follow the lead of McDonald's and Starbucks with plans for a worldwide expansion.

Promising shareholders at the company's annual general meeting a "dramatically different" company in four years, chief executive Don Schroeder said the company is looking to extend beyond Canada and the United States.

"We are in the process right now of developing an international strategic plan, and we are going to present that to the board next month," he said after the meeting. "Later this year, assuming it is approved, we will make a further announcement (about) the next step."

Tim Hortons, which has 3,029 stores in Canada and 567 in the U.S., also has 290 self-serve coffee-and-doughnut kiosks inside Spar convenience stores in Ireland and England.

Schroeder did not elaborate on what countries may be targeted for expansion, saying the company needs to study the potential markets carefully. "It is easy to say it should be in China, it should be in India, that there are a lot of people there. But if you look at the landscape, it is littered with people that jumped in too quickly."

The Tim Hortons brand has seen further exposure after setting up locations on military bases in Afghanistan, Iraq and Fort Knox, Kentucky.

"It is a great opportunity for us to build a relationship with the U.S. military," Schroeder said. "We hope to expand that relationship."

Tim Hortons, the largest quick-serve restaurant company in Canada, is looking beyond this country for new growth and continues a slow climb to strengthen its presence in the highly competitive U.S. market.
